BIOB12 H3Y
Cell and Molecular Biology Laboratory
Summer 2014

Instructor:  Daman Bawa
Office:     SW-563B
E-mail:     bawa@utsc.utoronto.ca

Teaching Assistants:  Andrew Peters, Michele Taffs, Patricia Gali

Office Hours:  Thursdays 10:30 AM – 1:00 PM
Please be prepared and consult lecture materials and online sources
prior to coming to the office. Appointments outside these hours can be
arranged by e-mail.

Lecture:     Tuesdays 9-10 AM
             Room SW-128

Textbook:    There is no textbook for the course. However, textbook used for BIOB10/B11
does have some good background information

The best way to reach me outside the office hours is by e-mail. Please use your UTSC or
UTORONTO e-mail account and include your course code in the subject. Emails sent
from non-university accounts will not be answered.

BIOB12 is a laboratory/lecture based course. The emphasis is on the laboratory and lectures
complement what is done in the laboratory each week. Assignments, term test and the final exam will
be based on background material required for the laboratories and questions that directly relate to
what was done in the laboratory as well as applied questions that require the background of the
concepts presented in the laboratory.

Attendance in the laboratories is required. Each module in the laboratory will begin with a quiz.
The questions/answers to the quizzes will be covered in the posted laboratory exercises as well as
within the lecture on the related material. During lecture we will also go over specific details related
to what you will do in the laboratory that week. Attendance in lecture is highly recommended to assist
you in the laboratory component.

Modified from Brunt, 2011
Objectives of this course: This laboratory course provides the introduction to major techniques in cell and molecular biology. Each module addresses techniques that are fundamental to carrying out laboratory based work in all types of laboratories, industry, government, clinical and research laboratories. It provides the foundation for upper year laboratory courses in biochemistry, microbiology and molecular biology. Students will be provided with hands-on experience in spectrophotometry, basic microbiology culturing techniques, DNA isolation, basic plasmid cloning, restriction endonuclease analysis, protein isolation and SDS-polyacrylamide gel analysis. Students over the course of the term will develop skills in data analysis and scientific analysis. At the completion of the course students will have a laboratory skill set that will prepare them for upper year cell and molecular biology laboratory courses and the knowledge to understand molecular biology methodology presented in upper year courses. In addition, the students will have a basic set of skills that will be useful for future employment in laboratory based careers. Moreover, the students will gain an appreciation and understanding in how to carry out work in an organized manner with attention to detail and understanding of quality control in experimentation. Each student is encouraged to ask questions, and participate in class, in laboratories and in office hours. Often times a question can lead to an interesting discussion for all students.

Lectures:

BIOB12 is a laboratory course. The material covered in the one hour lecture will relate to the laboratory techniques carried out throughout the course. It will include discussion of methodologies, theory behind the methodology and applications for the particular techniques used. Lecture gives you a chance to also ask questions regarding the theory behind the labs you will be conducting. Therefore come with questions. Lecture material will be posted on the intranet by the day of the lecture. I will cover material from laboratories. Attendance will help to put the laboratory material in context and prepare for the quizzes. The lectures come from a number of sources including primary technique papers, reviews and technical manuals. The lectures have been modified from lectures of Dr. Shelley Brunt.

The emphasis of the course is the laboratory, the lectures complement the laboratory.

Laboratories:

- **Attendance in labs is mandatory.** If you miss a lab you must provide a UTSC medical certificate to be excused from the lab and to be able to hand in any assignments related to that lab. The labs are full therefore you will likely not be able to makeup labs. You will lose 4% of your grade for each missed lab. You will not be allowed to hand in any assignment that relates to the missed lab or write the quiz, so the penalty may exceed the 4% state above. **Missing more than three labs with no acceptable excuse will lead to the forfeit of all laboratory related grades and the removal from the course**

- Labs run twice a week for a total of 6 hours of contact
- Laboratory exercises will be posted on the intranet at least a week prior to the date of the scheduled laboratory.
- **It is your responsibility** to come prepared each week to carry out your laboratory. The following preparation will be required:

Modified from Brunt, 2011
To have completed an introduction to each lab (a paragraph) explaining the purpose

To have written out your own flow chart (this is what you should refer to when doing the lab). You flowchart should be written such that you should not have to refer back to your lab notes during the lab.

When carrying out experiments you must take complete notes. Therefore, as you do the experiment you will “log it”. This means writing down in detail what you did, what you observed, times of incubations. You will have data analysis (including standard curve construction) summary / conclusion, where you analyze the data, do any graphs etc that are required. Your TA will initial this book on a regular basis and collect your books for a final grade.

- To ensure you are prepared for the lab there will also be quizzes on each lab topic (see schedule) which will test whether you have adequately prepared for the lab. Attendance at lectures will help you with the material

- Equipment in the lab is expensive. You are responsible for your equipment. Accidents can happen but most “accidents” are avoidable with proper preparation and attention to the task at hand.

For laboratory, the students will require:

1. Lab coat and closed toed shoes (no exceptions)
2. Safety glasses
3. A permanent black marker
4. A book for recording your work (your log book). This book can be hard or soft cover, or a binder.
5. Absolutely no food, drink, or gum chewing is permitted in the laboratory. Students will required to leave the laboratory if they eat or drink in the laboratory.

Accessibility: Students with diverse learning styles and needs are welcome in this course. In particular, if you have a disability/health consideration that may require accommodations, please feel free to approach me and/or the AccessAbility Services Office as soon as possible. I will work with you and AccessAbility Services to ensure you can achieve your learning goals in this course. Enquiries are confidential. The UTSC AccessAbility Services staff (located in S302) are available by appointment to assess specific needs, provide referrals and arrange appropriate accommodations (416) 287-7560 or ability@utsc.utoronto.ca.

Academic integrity/plagiarism: Academic integrity is essential to the pursuit of learning and scholarship in a university, and to ensuring that a degree from the University of Toronto is a strong signal of each student’s individual academic achievement. As a result, the University treats cases of cheating and plagiarism very seriously. The University of Toronto’s Code of Behaviour on Academic
Matters (http://www.governingcouncil.utoronto.ca/policies/behaveac.htm) outlines the behaviours that constitute academic dishonesty and the processes for addressing academic offences. Potential offences include, but are not limited to:

**In papers and assignments:** Using someone else’s ideas or words without appropriate acknowledgement. Submitting your own work in more than one course without the permission of the instructor. Making up sources or facts. Obtaining or providing unauthorized assistance on any assignment.

**On tests and exams:** Using or possessing unauthorized aids. Looking at someone else’s answers during an exam or test. Misrepresenting your identity.

**In academic work:** Falsifying institutional documents or grades. Falsifying or altering any documentation required by the University, including (but not limited to) doctor’s notes.

All suspected cases of academic dishonesty will be investigated following procedures outlined in the Code of Behaviour on Academic Matters. If you have questions or concerns about what constitutes appropriate academic behaviour or appropriate research and citation methods, you are expected to seek out additional information on academic integrity from your instructor or from other institutional resources (refer to: http://www.utoronto.ca/academicintegrity/resourcesforstudents.html).

**Use of Turnitin.com:**

"Normally, students will be required to submit their course essays to Turnitin.com for a review of textual similarity and detection of possible plagiarism. In doing so, students will allow their essays to be included as source documents in the Turnitin.com reference database, where they will be used solely for the purpose of detecting plagiarism. The terms that apply to the University's use of the Turnitin.com service are described on the Turnitin.com web site”.

If you wish to opt out of turnitin you must send me an email and then submit an electronic copy to me.

**Grade Breakdown:**

**Midterm (lab and lecture material):** 19% (multiple choice, short answer, calculations, short essay). **Date:** TBA

- You must contact me within 48 Hours of missing the midterm and provide me with the UTSC medical certificate filled in by your physician to be able to write the makeup exam

**Final exam (lab and lecture material):** 34% (multiple choice, short answer, calculations, and short essay). The final exam will be cumulative as it relates to overlapping concepts through the course. **Date:** TBA; during final exam period

Modified from Brunt, 2011
Quizzes: (8 X 1.75%) 14%

Quiz 1: May 13 - Spectrophotometry and protein assays
Quiz 2: May 20 - Bacterial growth and enumeration
Quiz 3: May 27 - Preparation of competent cells/ transformation/ plasmid prep
Quiz 4: June 3 - Restriction enzyme analysis and gel electrophoresis
 Quiz 5: June 24 - Gene regulation
Quiz 6: July 9 - Biochemistry module: bacterial homogenate
Quiz 7: July 15 - Biochemistry module: protein assay, SDS PAGE
Quiz 8: July 29 - Microscopy

Lab performance: 10%

- Preparation 2%
- Technical performance 2%
- Laboratory log/ summary/data analysis 4%
- Pass/fail in lab assignments/ one minute writes 2%

- Lab notebooks will be initialed each week and TAs will keep a record throughout term, the books will be handed in on August 5, 2014 for the final grade. If you have not kept up to date each week your marks will reflect your work

Lab assignments: 23% (The content required for each assignment will be explained during the appropriate lecture and laboratory class.)

1. Restriction mapping (4%) – In lab, on July 8

2. Formal report gene regulation (9.5 %) – Due on July 15

3. Formal report on Biochemistry module (9.5 %) – Due on Aug 5

Modified from Brunt, 2011
LAB SCHEDULE: The labs will run according to the following schedule. If any changes need to be made due to unforeseen circumstances, it will be posted on Blackboard.

A: designates the first lab of the week (Tuesday)
B: designates the second lab of the week (Wednesday)

<table>

Modified from Brunt, 2011
June 16  **READING WEEK**

June 23  7A  Lac operon Gene regulation experiment 1 using wild type and mutant strains of *E.coli* *(Quiz 5)*

7B  Plan your experiment (dry lab: you will analyze results from 7A and plan your own experiment for next week)

June 30  8A  **Canada day – University closed**

8B  Student experiments in gene regulation using the Lac operon

July 7  9A  Analysis and discussion of results; discussion of requirements for lab reports. *Restriction mapping assignment in class (last hour)*

9B  Biochemistry module: Making a bacterial homogenate using wild type, mutant strains, recombinant strain of *E.coli* *(Quiz 6)*

July 14  10A  Biochemistry module: SDS polyacrylamide gel electrophoresis *(Quiz 7)*. *Gene regulation lab report is due*

10B  Data analysis of SDS-PAGE and outline of report requirements

July 21  11A  TAs will return reports and be available for 1 hour for assistance on biochemistry module report / presentations

11B  Presentation on results from biochemistry module

July 28  12A  Microscopy module *(Quiz 8)*

12B  No lab

Aug 5  **Lab report and lab books due in lab (1hr)**
LECTURE SCHEDULE:

More than one topic may be covered in one week and some of the other topics will be covered over more than one lectures

**Topic 1:** Overview of the course; scientific calculations/methodologies

**Topic 2:** Spectrophotometry/protein assay

**Topic 3:** Microorganisms used in molecular biology/growth, enumeration

**Topic 4:** Recombinant DNA techniques: plasmid preparation, restriction digests, gel electrophoresis, restriction mapping, cloning, use of polymerases, ligases etc.

**Topic 5:** Gene Regulation, use of colorimetric assays

**Topic 6:** Biochemistry techniques: protein isolation, chromatography, dialysis, gel electrophoresis

**Topic 7:** Microscopy

**Topic 8:** Other molecular biology techniques
