The Prisoners Dilemma.

Two spies, A and B, are captured.

They are interrogated separately. If either prisoner betrays the other, the betrayer will be freed and the other tortured and then executed.

If they both remain silent, they are both imprisoned for six months.

If they each betray the other, they will be executed (but not tortured).

Putting yourself in A's place, what should you do?

	A is silent	A betrays B
B is silent	6 months jail for both A and B	A goes free / B tortured + executed
B betrays A	B goes free / A tortured + executed	A and B are both executed (not tortured)

	World Reduces GHG Emissions	World does not Reduce
Canada Reduces GHG Emissions	we suffer, make no difference	we suffer, make no difference
Canada Does Not Reduce	living high	living high (until the end)
