

The wolf, the sheep and the hay.

(A puzzle from the 8th century!)

Your job is to get a wolf, sheep and hay bale across the river.

Your boat only holds one item (besides yourself).

**But, if the wolf is left alone with the sheep, the wolf eats it.
If the sheep is left alone with the hay, the sheep eats it.**

How do you get them all across? How many trips do you have to make across the river?
