

Combination of One Major & Two Minors

Refer to your UTSC course Calendar. Look up your program by name, then refer to the Program Requirements section. Here you will see the number of FCEs required for this program. Record this below. You will also see a list of the required courses for your program. List the courses in the box below that you are using to complete the requirements of this program, which includes those completed, in progress and planned, if applicable. Remember that it is your responsibility when choosing courses to minimize the amount of overlap between your programs.

Major _____ requires ____ FCEs, including:	

Minor _____ requires <u>4.0</u> FCEs, including:	
Minor _____ requires <u>4.0</u> FCEs, including:	

Look at the courses listed above. Compare the three boxes. Do any of the same courses appear in more than one box? If a course appears in two boxes, mark an X beside the duplicate course in just **one** of the boxes. (It doesn't matter which one of the two you flag with the X.) If a course appears in all three, mark an X beside it in **two** of the boxes. Continue this task until you have identified all the duplicate courses. Now count the courses that **do not** have an X beside them and divide this number in half (because each UTSC course, with very few exceptions, carries a credit value of 0.5 FCEs). Record number of FCEs here: 

If this number is 12.0 or greater, you have met the requirement for presenting 12.0 distinct FCEs. If the number is 11.5 or less, you have too many overlapping courses. Look to see if you could make a change to some of your choices above. If after reviewing this, you still do not have 12.0 distinct courses, you will need to discuss this with the supervisor of one (or more) of your programs. They will need to advise you about additional course(s) that you can take in the program area so that you can meet this requirement.

Combination of Three Minors

All minors consist of 4 FCEs, which means that in the combination of three minors the total number of program requirements is 12. This means that in order to have 12 distinct FCEs, all of the courses would have to be different. If you are not sure, it is best to list all of the courses you are using as program requirements for each of the minors. To do this, refer to your course calendar. Look up your program by name, then refer to the Program Requirements section. You will see a listing of the required credits for your program. List the courses that you are using to complete the requirements of this program. This includes those completed, in progress and planned, if applicable. Remember that it is the students' responsibility when choosing courses to minimize the amount of overlap between programs.

You can use the boxes above to list your courses; just change the box that says "major" to "minor." In the space for required FCEs, put 4 in all boxes. If all the courses are different, then you have no overlapping courses. You have met the requirement for presenting 12 distinct FCEs. If the same course appears in more than one box, you do not meet the 12 distinct credit requirement. Look to see if you could make a change to some of your choices above. For example, if you were to choose 1.0 FCE from a list of choices could you choose/use a different course to meet that same requirement. If after reviewing this, you still have overlapping courses, you will need to discuss this with the supervisor of one (or more) of your programs. The supervisor will need to advise you on additional course(s) that you can take in the program area so that you can meet this requirement.

If you are unsure about meeting any of your degree requirements or if you need to change one of your programs, please visit the Academic Advising & Career Centre (AA&CC) to discuss things further.
