

About Statistics at U of T Scarborough

For students who are interested in Statistics and admitted to a different admission category (Fall 2023)

The Statistics program is an entry point to the science of collecting, analyzing, and interpreting data to present meaningful findings. Statisticians learn how to think critically and solve complex problems to inform business decisions, evaluate project effectiveness, recognize patterns, forecast future opportunities, and so much more.

The number of students admitted to this program is limited. Students can apply to enter the Statistics Specialist or Major programs at the end of their first year. Admission will be based on their grades in required first year courses.

We anticipate having several spaces available in the Statistics Major and Specialist for students from admission categories other than Statistics. The number of spaces will vary from year to year, depending on the number of successful applicants from the Statistics admission category.

There is a high demand for Statistics programs. If you are not in the Statistics admission category, then the grades required to be admitted to one of these spaces will likely be higher than the requirements for students in the Statistics admission category. Students will be selected for admission based on their grades in the required courses. The actual grades needed will vary from year to year depending on the number of available spaces and the applicant pool.

First Year Statistics Courses

In order to apply to enter the Statistics program, students must first take the following courses:

- Introduction to Computer Science I
- Calculus I for Mathematical Sciences
- Calculus II for Mathematical Sciences
- Linear Algebra I for Mathematical Sciences
