Overview:
Structural geology is the study of the deformation structures in Earth's lithosphere. Structures such as folds, faults, mineral fabrics, and the respective patterns occur at a variety of scales and lead to changes in shape and geometry of rocks. Deformation description and various approaches in ‘Structural analysis’ will be covered in this course:

- Geometric analysis – analysis of the geometry (patterns, shapes and mineral fabrics) of primary structures acquired while the rock was being deposited or emplaced, and secondary structures produced by subsequent deformation
- Kinematic analysis – analysis of the displacement and movements that lead to shape changes (deformation = strain) of rock bodies
- Mechanical and dynamic analysis – reconstruction of forces (stress e.g. magnitude, direction, duration) that led to deformation within a rock body

These help to describe deformation structures, delineate deformation conditions, better understand deformation and processes such as plate tectonics.

Objectives of the course:
The objective of this course is to introduce students at a beginner to intermediate level to the fundamentals of structural geology and structural analysis. At the end of the course you can:

- use a compass to take structural geologic measurements
- construct and interpret geologic maps and cross sections
- describe and analyse geologic structures and infer related kinematics and dynamics
- explain the fundamentals of the mechanics of brittle and ductile deformation of rocks
- identify and interpret of geologic structures in the field
- infer rock forming and altering processes.
- use your spatial skills to interpret subsurface structures based on given geologic information

Overall, the course is expected to contribute to inferring deformation processes from observed geologic structures and to decipher the long processes based on the geologic record our planet holds. This bears not only on unravelling geodynamic processes, which have shaped the Earth’s crust, but also on understanding the formation of the natural resource deposits.

Pedagogic Study – Evaluation of exercises for 3D skill training effects in Geoscience courses:
It is paramount that basic knowledge of Geology and 3D visualization/spatial skills training is integrated in courses of all levels. To evaluate efficiency of 3D skill training in EESC37 - Structural Geology, we are pursuing a pedagogic study. For this study we will integrate additional 3D skill learning and training opportunities in the form of four specifically designed exercises (regular course participation).
You all are invited to participate by doing surveys (and possibly the interview), but none of you is required to do so. Additionally, you are able to withdraw your data at any time (also retroactively), in case you decide otherwise even after participating earlier.
For more information regarding the study and data collection, please see information posted by a Research Assistant on Quercus (announcements).

Readings:

Needed (download):  An introduction to geologic structures and maps, Bennison et al., Routledge, 8th edition, Free download through UTSC library - Online Course Reserve (quercus link).

Plate Tectonics – Continental Drift and Mountain Building, Frisch, Meschede and Blakey, 2011.

Free download through UTSC library - Online Course Reserve (quercus link).

<tr>
<td><strong>Total</strong></td>
<td><strong>100%</strong></td>
</tr>
</tbody>
</table>

### Lectures and Lab exercises:

There will be one two-hour lecture and one two-hour lab period per week. 

**ALL students are expected to attend ALL lectures. It is the responsibility of the student to ensure that notes are obtained for any classes missed.**

The purpose of the weekly lab period is to demonstrate practical methods for analysis of structural data and interpretation of geologic maps. **Labs are mandatory (30% - In-lab or homework) for all students and the respective assignments are graded.** During the lab you will have a chance to work more independently in order to strengthen your knowledge; during the lectures you’ll receive more guidance throughout the material. **Lab assignments are to be completed in one week and submitted in the following week’s lab.**

The knowledge acquired during the laboratory exercises can also be tested in the **3 Online Quizzes.**

### Needed for the labs:

- **Protractor** (drawing circles, measuring angles), calculator with trig function
- A drafting ruler (inches and centimeters), small scissors, pencils, eraser, color pencils
- **Metric (millimeter) graph paper** (get at e.g. Walmart or Amazon) for precise drawings of geologic cross sections.

### Course Participation:

Your **active course participation is worth 3% of the final grade** (grade is not based on right answers, but participation). Participation in the lecture exercises will be tracked by the instructor or based on the electronic submission of your in-class exercises (e.g. in electronic file form or discussion board posts). You can miss up to 25% of the (live - recorded lecture) activities without losing grades, hence if your participation is between 100-75% off all lectures, you will get the full 3%. If your participation is between 75 and 50% you will get 1.5% of the participation mark. If your participation is below 50% no participation marks will be given (0%).

### 2-Day Field Trip – Hastings County (Marmora, Burleigh Falls to Bancroft etc.) – Group Work:

This field trip is mandatory for all students. **A fee for accommodation (TBA) will arise, which we will keep as low as possible.** Transportation costs are covered.

**During the field trip groups of 2-3 students will look at the local rock formations, describe and ID these, 2% of the grade will be based on trip participation and 3% will be based on your written (group) field trip report. Deadline: TBA.**

An equivalent alternative assignment will be given if a student cannot participate during the field trip.

Furthermore, we are outdoors and therefore some preparations are needed:

- Be prepared for any kind of weather (sun vs. rain: rain jacket, sun screen, hat)
- Sturdy footwear (at least running shoes, preferably hiking boots) - NO open-toed shoes, sandals, or heels!!!
- Adequate clothing (long pants, layers, rain cloth)
- Safety goggles or light tinted sunglasses
- Daypack with an adequate amount of water and lunch (+ smaller snack)
- If possible small camera, field book (e.g. small notebook), pencil & pen

Additional required safety equipment (e.g. hard hats, additional safety goggles) will be supplied by the department.

**Additional information will be given in a timely manner, as it is still unclear if it will be a 2-day trip (accommodation, equipment such as sleeping bag etc.).**
Online Quizzes:
The knowledge acquired during the laboratory exercises can also be tested in the 3 Online Quizzes. The online quizzes will be posted (see course schedule) and each quiz is 1 % (3% total) of final grade. Each quiz will consist of roughly 10-20 questions (multiple choice, True/False).

Quercus Glossary (3%):
Part of the course work is to create eight glossary posts (each 0.5%, total 3%). The glossary is hosted on Quercus and will include the most important new terminology of the course. You can select eight terms from the glossary list on Quercus. Student contributions will be monitored by the TAs and instructor throughout and by the end of the term (grade based on quality of term definition – figure/diagram if applicable).
3 of the posts have to be finished by Monday October 18, and the other 3 posts by December 5, 2022!

Library Service:
Research Help: University of Toronto Scarborough Library
Staff at the UTSC Library will be happy to help you find the resources you need for your assignments, and learn the research skills you will need for success at university.
Research help is available by phone, e-mail, chat, or in-person in the Library.
For more information, please see the Library's Help Guide for UTSC Students: http://guides.library.utoronto.ca/utsc_help
Need in-depth or department specific assistance? Contact Sarah Forbes, Liaison Librarian for Physical and Environmental Sciences: http://uoft.me/smforbes

Quercus:
Lecture and lab material will be posted on and Online Quizzes will be done through quercus. Please check quercus and your email (Uoft) daily for updates (e.g. assignments, announcements etc.). Quercus: q.utoronto.ca

Academic Integrity Statement:
Academic integrity is one of the cornerstones of the University of Toronto. It is critical and important both to maintain our community which honours the values of honesty, trust, respect, fairness and responsibility and to protect you, the students within this community, and the value of the degree towards which you are all working so diligently. According to Section B of the University of Toronto’s Code of Behaviour on Academic Matters, which all students are expected to know and respect, it is an offence for students:

• to use someone else’s ideas or words in their own work without acknowledging that those ideas/words are not their own with a citation and quotation marks, i.e. to commit plagiarism.
• to include false, misleading or concocted citations in their work.
• to obtain unauthorized assistance on any assignment.
• to provide unauthorized assistance to another student. This includes showing another student completed work.
• to submit their own work for credit in more than one course without the permission of the instructor.
• to falsify or alter any documentation required by the University. This includes, but is not limited to, doctor's notes.
• to use or possess an unauthorized aid in any test or exam.

There are other offences covered under the Code, but these are by far the most common. Please respect these rules and the values, which they protect. It is your responsibility to ensure that your work maintains academic integrity. If you have any concerns please see the instructor before a potential problem arises. Please familiarize yourself with the Code (http://www.governingcouncil.utoronto.ca/policies/behaveac.htm) and also with the handout “How not to plagiarize”, available in the Course Documents section on BB. At the University of Toronto academic dishonesty can result in a mark of zero, a reduction in final grades, denial of privileges, a monetary fine, failure in the course, suspension, permanent record, a recalling of degrees/diplomas and certificates, or expulsion.

Accessibility Needs:
The University of Toronto is committed to accessibility. If you require accommodations for a disability, or have any accessibility concerns about the course, the classroom or course materials, please contact Accessibility Services as soon as possible: UTSC campus AccessAbility http://www.utsc.utoronto.ca/~ability/ or St. George Campus DisAbility disability.services@utoronto.ca or http://studentlife.utoronto.ca/accessibility.
