Dear Students,

Welcome to Introductory Chemistry Part I! Our primary goal is to ignite your passion for chemistry by creating a meaningful learning environment with many real life applications of chemistry. The knowledge you gain in this course is applicable in diverse disciplines, including Medicine, Pharmacy, Environmental Sciences, Neuroscience, Biochemistry and Biology. We are looking forward to teaching you many interesting topics on molecular structure, chemical reactions and nuclear chemistry. Please read the course syllabus to understand the learning expectations and assessment methods. Looking forward to meeting all of you!

Although there is no pre-requisite for this course, it is highly recommended that you have completed grade 12 Chemistry and Grade 12 Advanced Functions or Grade 12 Calculus. The lectures for this course are three times a week for one hour and you are strongly encouraged to attend all the lectures to engage in the participatory lessons!

Instructors
Dr. Bernie Kraatz
Office: EV552
email: bernie.kraatz@utoronto.ca
Lecturing from September 7th until October 21st, 2022
Office Hours: TBA

Dr. Marco Zimmer-De Iuliis
Office: EV546 or SW155B
email: m.zimmer.deiuliis@utoronto.ca
Office Hours: TBA

Dr. Nirusha Thavarajah,
Coordinating Labs from September 6th - December 5th, 2022
Office Room Number: EV554
Email: nirusha.thavarajah@utoronto.ca
Office Hours: TBA
Email Policy
Please use the following guidelines when sending emails:

i. Use your “utoronto.ca” email account for all your correspondences. If other accounts (Yahoo, Gmail, Hotmail, etc.) are used, your email may be filtered out as spam and thus not be received.

ii. Put “CHMA10” in the subject line followed by the reason for the email and use professional language with a formal greeting.

iii. Sign the email with your first and last name. Include your student ID number after your name.

Every effort will be made to respond to student emails within 36 hours (M-F) provided that the above protocol is followed.

Required Text Book

- **NOTE**: Third or second edition is also fine. You will just have to adjust the suggested practice question numbers.

Quercus
CHMA10H3 maintains a Quercus web space, which archives a variety of course related information including: grades, class announcements, lectures and lab materials. Class e-mails will be sent periodically to your “utoronto.ca” e-mail account. To login, go to: [https://q.utoronto.ca](https://q.utoronto.ca). Login using your UTORid username and password. Then click on the CHMA10 link.

Announcements
Official announcements regarding the test schedule, material covered for each test and other important information will be posted on the CHMA10H3 course web site. It is absolutely your responsibility to check these postings regularly for important announcements.

Accessibility
Students with diverse learning styles and needs are welcome in this course. If you require accommodations for a disability, or have any accessibility concerns about the course or course materials, please contact us and or the Accessibility Services as soon as possible: SW 302, (416) 287-7560 or ability@utsc.utoronto.ca

Lecture Delivery

<table>

</tr>
</tbody>
</table>
Office Hours
Office hours will be either in-person or online via Teams or Zoom. Exact hours will be announced on Quercus.

Piazza Discussion Boards:
We will be using the Piazza Discussion Board for the class discussion. This page will be monitored by your course instructors. Post your chemistry questions to the Piazza discussion board instead of sending them to us via email. This way, the entire class can benefit from the question and answer.

You can find the piazza link directly in our Quercus shell homepage on the left-hand side tool bar.

Piazza can help with your conceptual understanding of CHMA10 material but do not use it to get help with assignments used for evaluations (quizzes or lab reports). You SHOULD NEVER POST THE ANSWER TO A QUESTION THAT HAS YET TO BE EVALUATED. Posting answers will be deleted, and offending students will be warned first and then may be subject to academic misconduct proceedings.

Questions of a private or personal nature should always be sent directly to the course instructors.

Homework
Short online homework problem sets will be released on Quercus at the end of each “module”. These are quizzes designed to test your understanding of concepts after we complete each chapter of the textbook. In general, once we complete a chapter during the lectures, you will be given 2 weeks to complete the homework quiz. Keep an eye out for announcements that will clarify details regarding specific deadlines.

Writing Assignment: Peer Reviewed Mock Journal using PeerScholar
Not only do we want everyone to be comfortable with communicating through emails, but we also want to support your writing skills in the context of chemistry. You will be asked to write an essay with the goal of exploring modern topics in chemistry. You will learn how to utilize both UofT Library resources and Web of Science while also training your writing skills. You will convey your research and learning on your topic in the form of a peer-reviewed 700-word essay. You will be asked to write an essay with the goal of exploring modern topics in chemistry. You will learn how to utilize both UofT Library resources and Web of Science while also training writing skills. You will convey your research and learning on your topic with a peer-reviewed 700-word essay (The word limit will be capped at 700 words for the whole essay, which includes your references and title).

The peer-review process is the cornerstone of writing and communicating new results and ideas in the sciences. A part of this process heavily depends on you! You will be asked to apply critical thinking skills to give and receive feedback to fellow colleagues. You will experience this process while doing this assignment by using PeerScholar and online learning modules that will guide you throughout the various components of the assignment. The assignment will be worth 15% of your final grade. Below is the breakdown of those marks:
### Completion of Quercus module

<table>

**Total = 15%**

### Participation in the Writing Assignment and Late Penalties:

This writing assignment requires you to write a paper and also to provide feedback. Your participation in all aspects of the assignment is very important. You MUST submit a draft of your paper so that others can offer feedback. It does not have to be perfect; it does not have to be finished; it doesn’t have to be the final product. But you need to submit something. If you do not submit a draft of your essay in the initial phase of this assignment, you will not be allowed to participate in the feedback process and you will **LOSE 3% OF YOUR GRADE**.

### Late Policy for Writing Assignment

If you hand in your **writing assignment** (via PeerScholar) late, then a penalty of 10% per day (including weekends) will apply up to a maximum of 50% of the grade of the essay. After 5 days, a grade of zero will be assigned.

You can find much more detail about the writing assignment on the CHMA10 Quercus page.

### Generative AI (ChatGPT) Policies and Notes

As you are probably aware, generative AI software is becoming more readily available. These tools are extremely useful and can also be time saving. For example, they could be used to help you check your grammar and spelling or to help you create an outline. However, you may not copy or paraphrase from any generative artificial intelligence applications, including ChatGPT and other AI writing and coding assistants, to complete written assignments or any other form of assessments in this course. You should not generate your entire assignment using these tools; the ideas and knowledge synthesis that you present in your assessment must be entirely yours. Generative AI does not always provide accurate references. Being able to write in a clear, cohesive, and informative manner is an important part of your university education and experience and while writing can be
challenging, it is also among the most important and transferable skills that you will acquire during your university studies. Please understand that this course policy is implemented to promote your learning and academic advancement to reach the course learning goals.

**Assessment and Grading Practices:**

<td>35</td>
</tr>
<tr>
<td>Lab</td>
<td>25</td>
</tr>
<tr>
<td><strong>FINAL MARK</strong></td>
<td><strong>100</strong></td>
</tr>
</tbody>
</table>

To pass the course, you **MUST** pass the laboratory **AND** achieve either combined average of 50% from both term tests **OR** the final exam (and receive a final grade of 50+, of course!). The laboratory component of CHMA10 is **compulsory**.

**Term-Test and Exam Policy:**

*Term-Tests*
There will be 2 term tests that will count as 20% of your final grade. Term Test 1 will be worth 8% and Term Test 2 will be worth 12%. The first of these tests will be administered on-line via Quercus and will be outside of class time. The second test will be in-person and written outside of class time. The exact date and time will be announced as soon as this information is made available from the registrar. The term-tests will consist of 20 to 25 multiple choice questions. To ensure you pass the course, you should aim to have a combined average of 50% or greater from both term tests.

*Final Exam*
There will be a **cumulative** exam written during the end of semester exam period. The exact date and time will be announced as soon as they are available. **Please note that if you miss the Final Exam, you must petition the Registrar's Office to write a make-up exam in the next formal exam period.** Check the UTSC Calendar for instructions and deadlines. It will be in-person.

*Allowed Aids*
Only non-programmable, non-communicating calculators are allowed in tests and exams for this course (both lecture and lab). Students **must** use their own calculators.
Missing Term Tests, Writing Assignments, or Homework

For missed term regarding the lecture materials due to illness, emergency, or other mitigating circumstances, please follow the procedures outlined below.

Notes:

- The following reasons are not considered sufficient for missed term work: travel for leisure, weddings, personal commitments, work commitments, human error.
- **Missed Final Exams** are handled by the Registrar’s Office and should be declared on eService: [http://www.utsc.utoronto.ca/registrar/missing-examination](http://www.utsc.utoronto.ca/registrar/missing-examination)
- Instructors cannot accept term work any later than five business days after the last day of class. Beyond this date, you would need to file a petition with the Registrar’s Office: [https://www.utsc.utoronto.ca/registrar/term-work](https://www.utsc.utoronto.ca/registrar/term-work)

Accommodations for Illness or Emergency, Religious Conflicts

For missed work due to ILLNESS, EMERGENCY, or RELIGIOUS CONFLICTS please complete the following process:

1. Complete the Request for **Missed Term Work Form**
2. Declare your absence on ACORN (Profile & Settings > Absence Declaration)

**Deadline:** You must complete the above form within 5 business days of the missed work.

Accommodations for Academic Conflicts

For missed term work due to an ACADEMIC CONFLICT (i.e. two quizzes or tests scheduled at the same time), please complete the following process:

1. Complete the Request for **Missed Term Work Form** choosing “Other” as your reason for missed work and explaining the conflict in the space provided.

**Deadline:** You should report the conflict at least two weeks (10 business days) before the date of the activity, or as soon as possible if it was not possible to identify the conflict earlier.

**Note:** Multiple assignments due on the same day are not considered conflicts. Accommodations may only be possible in the case of quizzes and tests that are both scheduled during the same discrete period. Back-to-back tests/quizzes are not considered conflicts.

**Note:** Students are responsible for keeping their course timetables conflict-free. Students who choose to register in two synchronous courses with overlapping lecture/tutorial/lab schedules may not necessarily be accommodated.

After submitting your documentation:

You are responsible for checking your Quercus course announcements daily, as accommodations may be time-critical.
You should continue to work on your assignments to the best of your ability, as extension accommodations may be as short as one business day, depending on the nature of the illness/emergency.

If an accommodation has been granted but you are unable to meet the conditions of the accommodation (ex. you need a longer extension, or you missed a make-up test), you will need to repeat the missed term work procedure and submit additional forms to request further accommodation. Note that in the case of a missed make-up test, an opportunity to write a second make-up test will not be provided.

Completion of this form does not guarantee that accommodations will be made. The course instructor reserves the right to decide what accommodations (if any) will be made. Failure to adhere to any aspect of this policy may result in a denial of your request for accommodation.

Academic Integrity
Academic integrity is one of the cornerstones of the University of Toronto. It is critically important both to maintain our community which honours the values of honesty, trust, respect, fairness and responsibility and to protect you, the students within this community, and the value of the degree towards which you are all working so diligently. Detailed information about how to act with academic integrity, the Code of Behaviour on Academic Matters, and the processes by which allegations of academic misconduct are resolved can be found online: [https://www.academicintegrity.utoronto.ca/](https://www.academicintegrity.utoronto.ca/)

According to Section B of the University of Toronto’s Code of Behaviour on Academic Matters [http://www.governingcouncil.utoronto.ca/policies/behaveac.htm](http://www.governingcouncil.utoronto.ca/policies/behaveac.htm) which all students are expected to know and respect, it is an offence for students to:

- To use someone else's ideas or words in their own work without acknowledging that those ideas/words are not their own with a citation and quotation marks, i.e. to commit plagiarism.
- To include false, misleading or concocted citations in their work.
- To obtain unauthorized assistance on any assignment.
- To provide unauthorized assistance to another student. This includes showing another student completed work.
- To submit their own work for credit in more than one course without the permission of the instructor.
- To falsify or alter any documentation required by the University. This includes, but is not limited to, doctor's notes.
- To use or possess an unauthorized aid in any test or exam.

There are other offences covered under the Code, but these are by far the most common. Please respect these rules and the values which they protect. Offences against academic integrity will be dealt with according to the procedures outlined in the Code of Behaviour on Academic Matters.

Lecture Topics and Learning Outcomes

Below is a list of topics that will be covered in this course, along with the corresponding chapters and learning outcomes.

1. **The Quantum-Mechanical Model of the Atom (Chapter 7):** Students will be able to
   i. Explain the need for the development of the quantum mechanical model of the atom and know the key scientists who made major contributions to its development.
   ii. describe the evidence for the wave/particle duality of electrons and photons.
   iii. Be able to describe the electronic configuration of an atom or ion using the four quantum numbers and how these relate to the number of nodes in an atom.
   iv. Recognize how the quantum mechanical model of the atom is reflected in how the periodic table is organized.
   v. Use Hund’s rule and the Aufbau principle to write electron configurations for atoms and ions.
   vi. Use the Bohr Equation to calculate the energy of electronic transitions in elements.
   vii. Interpret results from the Heisenberg Equation regarding probability

2. **Periodic Properties of the Elements (Chapter 8):** Students will be able to
   i. Write electron configurations from the periodic table and relate quantum numbers to the location of elements in the periodic table.
   ii. Estimate the effective nuclear charge, Zeff, and use it to explain and predict trends in:
      • Atomic size
      • Ionic size
      • Relative ionization energies
      • Electron affinity
   iii. Recognize periodic behavior of the elements.
   iv. Identify the three main types of chemical bonds and how to classify them based on electronegativity

3. **Thermochemistry (Chapter 6):** Students will be able to
   i. Define enthalpy of a reaction.
   ii. Explain the difference between exothermic and endothermic reactions and the sign conventions for each type as related to chemical reactions.
   iii. Perform calculations using Hess’s law to determine ΔHrxn
   iv. Perform calculations with respect to the standard enthalpy change for a reaction.

4. **Chemical Bonding I: Lewis Theory (Chapters 9):** Students will be able to
   i. Distinguish between ionic, covalent and metallic bonding.
   ii. Estimate bond polarity based on electronegativity trends.
iii. Use Born-Haber cycle data to calculate lattice energies for ionic compounds.
iv. Draw Lewis structures for ionic and covalent compounds.
v. Determine formal charges for all atoms in a Lewis structure.
vi. Draw resonance structures for compounds where a single Lewis structure is inadequate.
vii. Rank resonance structures according to their contribution to the overall resonance hybrid.
viii. Make qualitative predictions about bond length/strength.
ix. Estimate reaction enthalpies from bond energy data.

5. Chemical Bonding II: Molecular Shapes, Valence Bond & Molecular Orbital Theory (Chapter 10):
   Students will be able to
   i. Predict the electron group geometry and/or molecular geometry of a molecule using VSEPR theory
   ii. Predict whether a molecule will have a net dipole moment
   iii. Describe the bonding in small molecules using VB theory
   iv. Predict the hybridization of an atom
   v. Distinguish between sigma and pi bonds
   vi. Identify the atomic and/or hybrid orbitals used to make a particular bond
   vii. Distinguish between bonding and anti-bonding MOs
   viii. Draw and interpret MO diagrams for simple diatomics
   ix. Use MO theory to predict properties of diatomic molecules (bond order, bond strength, magnetism)

6. Liquids, Solids and Intermolecular forces (Chapter 11): Students will be able to
   a) describe the types of intermolecular forces and use them to explain and understand the physical properties of substances such as surface tension, viscosity and capillary action.
   b) interpret vapor pressure curves and determine heat of vaporization using the Clausius–Clapeyron Equation 2-Point Form.
   c) read and interpret heating curves and perform calculations based on data extracted from heating curves.

7. Chemical Reactions and Stoichiometry (Chapter 4): Students will be able to
   i) Determine the limiting reagent in a reaction as well as calculating the theoretical and percent yields.
   ii) Determine solution concentrations and dilutions molarity.
   iii) Explain the pH scale and how it relates to water at equilibrium.
   iv) Analyze reactions based on the equilibrium constant with special focus on Ka, Kb and Kw
   v) Recognize and apply the concept of Lewis Acid/Bases Theory
   vi) Recognize and balance different types of chemical reactions including:
       (1) Acid/base
           (a) Identify strong acids and bases and weak acids and bases based on ionization constant
(b) write balanced neutralization reactions and reactions that evolve gases

(2) Precipitation
(a) Predict solubility and write precipitation reactions

(3) Redox
(a) Identify oxidation states and balance redox reaction in both acid and base solution.

8. **Gases (Chapter 5):** Students will be able to
   i. Rationalize the macroscopic properties of gases in terms of the kinetic molecular theory
   ii. Explain the relationships between temperature, volume, pressure and quantity in terms of the kinetic molecular theory
   iii. Interpret barometer and manometer readings
   iv. Use the gas law equations to calculate pressure, temperature, volume, density, molar mass and/or amount of gas in both static and changing systems
   v. Solve stoichiometry problems involving gases
   vi. Apply the ideal gas law and Dalton’s law of partial pressures to solve for properties of gas mixtures, including gas samples collected over water
   vii. Predict relative rates of diffusion/effusion for different gases and/or temperatures; use relative diffusion/effusion rate data to calculate relative molecular masses/molecular speeds
   viii. Interpret non-ideal behaviour of gases in terms of the kinetic molecular theory and its shortcomings; predict the extent of non-ideal behaviour for different gas samples
   ix. Calculate properties for real gases using the van der Waals gas equation
Laboratory Component of CHMA10

**You must receive a passing grade in the laboratory section to pass the course**

The goals of the CHMA10H3 laboratory program are primarily to familiarize students with safe laboratory practices and to improve their basic laboratory techniques. While some experiments may not appear directly related to lecture content, the activities and techniques have been selected to provide appropriate introductory chemistry training. The first-year chemistry laboratories are located in the basement level of the Science Wing in Rooms SW153 and SW159. The laboratory classes commence at 10 minutes past the hour. However, you are encouraged to arrive early so that TAs can check your pre-lab work in time so the lab can start on time.

The laboratory periods are three hours in length and run every other week. The lab component of the course is compulsory, and students must obtain a passing grade in the lab section to be eligible to pass the course. The lab component is worth 25% of your course grade.

Lab Manual and Notebook
A PDF lab manual will be posted on the course Quercus under Lab Module 1. You may not use a lab manual from a previous semester: the experiments and course requirements will differ. Students will be required to purchase their own lab notebook. The book must be hard cover, permanently bound (not spiral or loose leaf) with the approximate dimensions 8.25” x 10.5” inches. They can be purchased at the UTSC bookstore; however, students can purchase their books at a merchant of their choice (as ice (so long as they meet the above requirements).

DO NOT wait to read your posted lab manual as it contains a host of important information:
- Lab Schedules and other important dates
- Late and absence policies
- Rules regarding safety
- Appropriate attire for the labs
- Guidelines on how to properly prepare for the lab

Laboratory Schedule
Week 1 lab students
Students assigned to practical sections ending in odd numbers (i.e. P0001, P0003, P0005, P0007) have their first lab during the week of September 11th.

Week 2 lab students
Students assigned to practical sections ending in even numbers, (i.e. P0002, P0004, P0006, P0008) have their first lab during the week of September 18th.

**Lab Skills Seminars:**
There will be a weekly lab skills seminar via Zoom by Professor Nirusha Thavarajah; please check the course Quercus for the dates and the Zoom link. The lab skills sessions will cover the **pre-lab work expectations** and **lab procedure and techniques, and the post-lab work requirements** for each lab.

**Absence from the Laboratory**

**Accommodations for Illness or Emergency, Religious Conflicts**

For missed labs and lab submissions due to ILLNESS, EMERGENCY, or RELIGIOUS CONFLICTS please complete the following process:

1. Complete the **Request for Missed Term Work Form** (Link is posted under the lab introductory module on course Quercus website)
2. Declare your absence on **ACORN** (Profile & Settings > Absence Declaration)

If you provide appropriate reasoning for missing your scheduled lab session, you may be eligible to join a make-up lab session, pending available lab space. If you fail to notify the day of your absence you will **NOT** be eligible to request a make-up lab session.

**Deadline:** You must complete the above forms within **5 business days** of the missed work to be considered as a late submission.

*If a post lab assignment is missed and no reasonable explanation or supporting documentation are provided, there is penalty of 10% per day will be applied.*

Completion of this form does not guarantee that accommodations will be made. The course instructor reserves the right to decide what accommodations (if any) will be made. Failure to adhere to any aspect of this policy may result in a denial of your request for accommodation.
If a student misses a lab and provides no reasonable explanation or supporting documentation, a mark of zero will be assigned.

Students must attend at least 4 out of the 5 scheduled experiments in order to be eligible to pass the course. If a student misses one experiment, and provides appropriate documentation, they will be considered for a make-up lab for that experiment. If a student misses a second experiment, even if they provide appropriate supporting documentation, they will automatically fail the course.

If you miss a lab when you are required to hand in material for marking (i.e. Report Sheets), the original report sheet or a scanned copy must be submitted to the Lab Coordinator (Ms. Veronica Cavallari, veronica.cavallari@utoronto.ca) within 48 hours of the missed lab. Standard late penalties (i.e. 10% per day up to 5 days – material submitted after 5 days will be assessed a grade of zero) will be applied to material submitted after the 48 hr. Deadline.

Late Policy
1. If you are late to your lab, but the pre-lab discussion is still underway you will be allowed to participate, given that you have completed all the pre-lab work.
2. If you are more than 30 minutes late for your lab you WILL NOT BE ALLOWED TO PERFORM THE EXPERIMENT AND A MARK OF ZERO WILL BE ASSIGNED FOR ALL OF THE COMPONENTS ASSOCIATED WITH THAT LAB SESSION.
3. If you show up to the lab without completing your pre-lab work in your notebook, you WILL NOT BE ALLOWED TO PERFORM THE EXPERIMENT AND A MARK OF ZERO WILL BE ASSIGNED FOR ALL OF THE COMPONENTS ASSOCIATED WITH THAT LAB SESSION.

Late Penalties
- Report Sheets
  o -10% of the total (not your grade) per day for 5 days (weekends count as two days unless you email a scanned copy of it to the lab coordinator).
  o After 5 days a grade of zero will be assigned
- Notebooks
  o Your notebook will be graded on a regular basis during lab time; your assessment will include prelab preparation and in-lab performance. Refer to the lab manual for details on lab notebook preparation and assessments in the lab manual introduction.

You must receive a passing grade in the laboratory section in order to pass the course

Lab Safety
Safety in the laboratory is an extremely important element in the chemistry program at this University. Failure to follow safe practices can cause laboratory accidents which may result in the loss of time, damage to clothing and other property, and most importantly personal injury. By following suitable precautions, you can anticipate and prevent situations that would otherwise lead to accidents. Students registered in CHMA10H3F will be automatically enrolled in the WHMIS 2023 Training course for the Fall 2023 semester.

Once the course is made available an email announcement will be made and a link to the course will appear in your Quercus home page. As part of this course, students will be expected to watch a couple of videos (approximately 90 minutes long in total) and take a multiple-choice quiz on the material you just learned. Students must obtain 80% on the quiz to pass the WHMIS course. In addition, students will be required to print off your quiz results and present them to your TA before you will be allowed to enter the lab.

Safety Equipment
Students will be required to purchase approved indirect vented chemical splash safety goggles, and a lab coat before attending their first lab. These items can be purchased from both the Environmental and Physical Sciences Student Association (EPSA) and the Biology Student Association (BioSA) or through the bookstore. All safety eyewear must meet either ANSI Z87+ or CSA Z94.3 Standard for high impact protection (if you see one of those standards stamped on your eyewear somewhere then they meet that particular standard). As part of your ancillary fees, all CHMA10H3F students will be provided a pair safety glass at their first lab session which can be worn during your quizzes and pre-lab discussion; however, when the experiment begins, students will be required to wear their indirect vented chemical splash goggles.

Labs coats must be 100% cotton – no exceptions.
Further information regarding appropriate attire please see the guidelines outlined in your lab manual.

Note that students not wearing approved safety gear will not be allowed to participate in the lab.
