"FUNDAMENTALS OF SITE REMEDIATION" (EESD15H3-F L01)

Instructor: Dr. Silvija Stefanovic

Lecture: Friday 12–3pm; MW110 Office: EV366 Office hours: Friday 11-12pm Email: <u>silvija.stefanovic@utoronto.ca</u> Phone: 416-208-4873

TAs: Chaoran Li

Office: EV302 Office hours: TBA Email: chaoran.li@mail.utoronto.ca

Intent of the course:

This course consists of a study of the ways in which hazardous organic and inorganic materials can be removed or attenuated in natural systems. The theory behind various technologies, with an emphasis on bioremediation techniques and their success in practice. An introduction to the unique challenges associated with the remediation of surface and ground water environments, soils, marine systems, and contaminated sediments.

Prerequisite: Students must have successfully completed BIOA01H3 & BIOA02H3 & CHMA10H3 & CHMA11H3 & [PHYA10H3 or PHYA11H3]

Suggested readings:

"Fundamentals of Site Remediation", John Pichtel, 2007, The Scarecrow Press, Inc.

"Remediation technologies for soil and groundwater" [electronic resources], sponsored by Remediation Technologies for Soils and Groundwater Task Committee of the Environmental Council, Environmental and Water Resources Institute (EWRI) of the American Society of Civil Engineers ; edited by Alok Bhandari ... [et al.].Reston, Va. : American Society of Civil Engineers, c2007.

"Elements of the Nature and Properties of Soils" by N.C. Brady

Lecture notes:

The lecture slides will be posted in *.pdf format on the Blackboard. You will require Adobe Reader to open the files (available free of charge at <u>www.adobe.com</u>).

Course email policy:

Email is not an effective way of teaching and <u>email inquiries regarding course materials will not be answered</u>. Dr. Stefanovic will be available during designated office hours to answer questions regarding course material. If you have questions, then please see instructor during office hours – this time is for you so please do not hesitate to use it.

Grading:	Term assignments (2):	20% (2x10%)
	Seminar:	5%
	Quiz	5%
	Final Project Report:	15%
	Final Project Presentation:	10%
	Participation:	5%
	Final Exam:	40%

Assignments:

You will have problems to solve for each of two group assignments. You will be able to access the problem sheets on the Blackboard at the times detailed below. More details on the assignments will be circulated during the term.

Topic	On the Blackboard	Due date
Assignment #1	Sept. 23 rd	Oct. 7 th
Assignment #2	Oct. 28 th	Nov. 11 th

Seminar:

You will be assigned a specific type of contaminants and you will need to present its chemistry, sources, fate, and toxicology during short in class presentation (8min). This is a group seminar with 3-4 students per group. Topics will be given during the first lecture. One page Summery plus references and maximum eight Power Point slides to be sent to instructor day <u>before</u> the presentation. After the presentations the rest of the students will need to submit hand written summaries for the participation mark. More information will be circulated in the class.

Quiz:

You will have brief, 20min quiz week after the guest lecture. The quiz will be driven only from the material covered in the guest lecture. After the lecture the students will need to submit hand written summaries for the participation mark.

Final Project Report/Presentation

You will be assigned a real remediated site to <u>critically review</u> its problem circumstances such as site history, types and sources of contaminants, contaminant migration pathways, human and ecological receptors, natural and demographic site conditions and completed remediation techniques. This is a group project with 3-4 students per group (not necessarily the same students as for Seminar). Topics will be assigned during the first lecture. At the end of the term you will present your findings during 20min long in class presentation. The rest of the class will need to submit hand written summaries for the participation mark.

The hard copy of the final project report is due at the last lecture by 3pm. The length is limited to maximum 8 pages.

Final Exam:

The 3 hour final examination is worth 40% of the final grade for the course. It will be a combination of fill-in-theblanks, written (short essay) questions and calculations/problem solving questions. The final exam will draw from lectures and student's seminars and includes lecture notes and *any* material presented in the classroom. Information from the textbook and other resources not directly covered in class will not be tested on exams. More details about the exams will follow.

Other Course policies:

Late assignments will not be accepted and assigned a grade of zero. Extensions will be granted ONLY with medical note or under exceptional circumstances. Your TA must be informed about that immediately. Plagiarism will not be tolerated. Each student/group is expected to submit **individual work** for grading. It is an

<u>Plagarism will not be tolerated</u>. Each student/group is expected to submit **individual work** for grading. It is an academic offense to plagiarize and those who do, will be subjected to University procedures (see the University calendar).

 4. Environmental site assessment; Investigative methods; Natural attenuation. Assignment #1 Sept. 23rd 5. Selection of remediation procedure; Classification of techniques: Ex situ and In situ technologies; <i>Physical methods of trapping pollutant:</i> Encapsulation, Stabilization, Hydraulic trap Sep. 30th 6. <i>Physical methods involving removal of pollutants:</i> Excavation, Pumping water, Pumping-skimming, Washing and entrainment by a liquid. In situ venting, Soil vapour extraction (SVE), Air striping Oct.7th 7. READING WEEK Oct.14th 8. Surface water and marine systems remediation: Oil spills remediation methods. <i>Chemical Methods:</i> On site Washing, Oxidation, Reduction; Dechlorination, Electrochemical techniques; Oct. 21st 9. <i>Chemical Methods:</i> Remediation of the soils with excessive pH <i>Thermal methods:</i> Incineration, Thermal desorption, Pyrolysis, Vitrification. Assignment #2 Oct. 28th 10. Guest lecture: Yvonne Hoogeveen, P.Eng. Fisher Environmental Ltd. Topic: TBA Nov. 4th 11. Quiz; <i>Biological method:</i> Biodegradation in pile, Composting, Land farming, Bioventing and biosparging Biobarriers and biological screens. Phytoremediation; Lagooning. Nov. 11th 12. Final Project Presentations 	Lecture topics:		
2. Basic soil and groundwater properties (review)Sept. 9th3. Properties of Contaminants (Students' seminars)Sept. 16th4. Environmental site assessment; Investigative methods; Natural attenuation. Assignment #1Sept. 23rd5. Selection of remediation procedure; Classification of techniques: Ex situ and In situ technologies; Physical methods of trapping pollutant: Encapsulation, Stabilization, Hydraulic trapSep. 30th6. Physical methods involving removal of pollutants: Excavation, Pumping water, Pumping-skimming, Washing and entrainment by a liquid. In situ venting, Soil vapour extraction (SVE), Air stripingOct. 7th7. READING WEEKOct. 14th8. Surface water and marine systems remediation: Oil spills remediation methods. <i>Chemical Methods:</i> On site Washing, Oxidation, Reduction; Dechlorination, Electrochemical techniques;Oct. 21st9. Chemical Methods: Remediation of the soils with excessive pH Thermal methods: Incineration, Thermal desorption, Pyrolysis, Vitrification. Assignment #2Oct. 28th10. Guest lecture: Yvonne Hoogeveen, P.Eng. Fisher Environmental Ltd. Topic: TBA Biobarriers and biological screens. Phytoremediation; Lagooning.Nov. 11th12. Final Project PresentationsNov. 18th	1. Introduction, ground rules, expectations and course structure.
