

Introduction to Physics IA

PHY A10 - Fall 2012

Tuesday 3:00 pm - 4:00 pm AA 112 Arts & Administration Building
Thursday 3:00 pm - 5:00 pm AA 112 Arts & Administration Building

“The most incomprehensible thing about the world is that it is comprehensible.”
– Albert Einstein

Instructor: Johann Bayer

Office: SW 503B

Email: jbayer@utsc.utoronto.ca

Phone Number: 416-287-7327

Course Website: portal.utoronto.ca

Practical Sessions: 3 hours/week

Mon. / Wed. 9:00 am

Mon. / Wed. 1:00 pm

Thu. / Fri. 9:00 am

Leaders & Schedule: portal.utoronto.ca

Office Hours

Monday, Wednesday, Friday	11:30 am - 1:30 pm	3:30 pm - 4:30 pm
Tuesday, Thursday	12:30 pm - 2:30 pm	5:30 pm - 6:30 pm
or by Appointment (call or email to schedule)		

Course Description

In this first course for many of the Specialist and Major Programs in Physical and Environmental Sciences, we will provide an introduction to the concepts, approaches, and tools the physicist uses to describe the physical world while laying the foundation for classical and modern mechanics. Topics will include: the mathematics of physics, energy and work, momentum and conservation laws, kinematics and dynamics, Newtonian gravity, rigid-body motion, oscillatory motion, and wave phenomena.

By the end of the course you will be able to:

- Identify and define the vocabulary used in Physics to describe types of motion and their causes.
- Solve analytical and numerical problems that go beyond a plug-in-the-formula approach.
- Interpret and give examples of the laws of Nature governing the field of Newtonian mechanics.
- Using mathematics as our scientific language, employ techniques of single-variable calculus to model, simplify, and solve physical problems.
- Recognize and apply the fundamental laws describing wave and oscillatory phenomena.
- Employ problem-solving skills useful in the analysis of physical systems, in the form of: experiments, conceptual and phenomenological questions, and multi-concept detailed problems.
- Recognize the existence of a basic model for the study of Physics, and translate this model into tools and learning skills useful in other disciplines.
- Develop strategies to implement the acquired organization, study, and discipline skills learned in the course to future academic and professional areas.

Course Corequisite: Calculus I (MATA30 or MATA31)

Course Pre-requisites: Calculus and Vectors (MCV4U), Physics (SPH4U)

Required Materials

- **Textbook:** *Physics for Scientists and Engineers* by Randall D. Knight (Pearson, 2nd Ed.)

ISBN-10# 0132887193 or 0132887142

U of T Bookstore SKU# 12634378 or 12634392

The schedule provided at the end of this document indicates the readings you must do **before** each lecture. The reading quizzes and in-class participation will be based on this assigned reading.

Your first read of a given material does not need to be highly detailed. Focus on the main concepts, select one or two examples to read, and browse quickly through any derivations. This first reading will be the assumed starting point for all lectures. Therefore, failing to complete the readings and associated reading quizzes will impair your ability to understand our lecture discussions.

The textbook also provides the conceptual questions and detailed problems that will be the subject of the weekly online homework, practical activities, and group quizzes. Please note that you will need an access code to **MasteringPhysics**, either through a bundled textbook or bought separately from the bookstore.

- **Automated Student Response System:** *i>clicker* by Macmillan

U of T Bookstore SKU# 10599044

You will need a clicker to answer the in-class participation quizzes. To receive the participation mark you must register your clicker by **Sunday, September 23**. Instructions are available on the course website.

Note that in order to receive this participation mark you must be present with your clicker during the lectures. Having somebody else use your clicker in your place or using somebody else's clicker in their place is a serious academic offence that could have you facing expulsion from the university.

- **Calculator:**

Texas Instruments: TI-30X IIS (SKU# 10048306)

Sharp: EL-520XB (SKU# 10048016), EL-531XB (SKU# 10047965), EL-546XB (SKU# 10047880)

For the course any **scientific** and **non-programmable** calculator will be required. The models listed above are those available at the bookstore that satisfy the course requirements.

Grading Scheme

Component	Points	Due Date
Reading Quizzes	5	Ongoing (Pre-Lecture)
Participation	5	Ongoing (Lecture)
Online Homework	5	Ongoing (Weekly)
Practical Activities	10	Ongoing (Weekly Practicals)
Formal Lab Reports	10	Week 9 & Week 12
Test #1	10	Week 5
Test #2	20	Week 10
Final Examination	35	Exam Period (December 07 - 21)

Grade Components

Reading Quizzes (5%)

Before each Tuesday lecture and on MasteringPhysics you will be asked a set of questions from the assigned textbook readings for that week. You will have until **11:55 am** on Tuesday to submit your answers. Each quiz is worth **5 points**, and your final grade is the total sum of all quizzes up to a maximum of **50 points**. Use the **Class Schedule** to prepare for the lectures and reading quizzes.

Participation (5%)

During each lecture we will work on clicker questions from the textbook readings and the lecture presentation. During each lecture **1 point** can be earned by answering at least **75%** of the questions asked. The total sum of all lecture points makes up your participation grade up to a maximum of **20 points**. In addition, after each lecture one participation question will be selected for a performance bonus. An extra **1%** will be awarded to those students that correctly answer **50%** or more of the performance questions.

Online Homework (5%)

These will be a weekly set of questions posted on MasteringPhysics. The questions will be based on the previous week's textbook reading material and lecture presentations. Each homework is worth **10 points**, and your final grade is the average of the **best 10** results. A mix of conceptual questions and applied problem-solving exercises will be included.

Practical Sessions (20%)

In these three-hour weekly sessions we will discuss examples on the concepts introduced in your textbook readings and lecture presentations. We will apply these concepts and principles, in order to develop skills useful in scientific conceptual analysis and general problem-solving. Further work will focus on the development of experimental techniques related to Physics and the Scientific Method. Your grade will depend on group quizzes (2%), notebook-recorded group activities (8%), and two experiment-based formal lab reports (3% and 7%) written in collaboration with your assigned group.

Attendance to the practicals is **mandatory** and a deduction to your final practical grade would be applied should you miss a session. This deduction will be a percentage equal to the cube (third power), of the number of absences. More information will be provided in your first practical session on **Monday, September 19**, and in the course website.

Test #1 (10%)

The first test will be scheduled during **Week 5** and will be **1 hour** long. This test will feature the material from the lectures and textbook readings up to and including the discussions of Thursday, October 04. The questions will also be based on the practical activities and online homework up to and including material due on the week of Monday, October 01. The format includes only multiple-choice questions. The only aids allowed are your non-programmable scientific calculator, and a hand-written, double-sided, and letter-sized equation sheet. Photocopies or computer printouts are not allowed.

Test #2 (20%)

The second test will be scheduled during **Week 10** and will be **2 hours** long. This test will feature the material from the lectures and textbook readings up to and including the discussions of Thursday, November 08. The questions and problems will also be based on the practical activities and online homework up to and including material due on the week of Wednesday, November 07. The format includes multiple-choice questions as well as detailed problems. The only aids allowed are your non-programmable scientific calculator, and a hand-written, double-sided, and letter-sized equation sheet. Photocopies or computer printouts are not allowed.

Final Examination (35%)

The final examination will be scheduled during the exam period of **December 07 - 21**. Material for the final examination will include all the topics discussed in the assigned textbook readings, lecture presentations, online homework, and practical sessions. The final examination will be **3 hours** long and the format includes multiple-choice questions as well as detailed problems. The only aids allowed are your non-programmable scientific calculator, and a hand-written, double-sided, and letter-sized equation sheet. Photocopies or computer printouts are not allowed.

Class Policies

Name and Student Number

Any work you hand in must clearly indicate your name and student number, this includes practical activities, formal reports, tests, and the final exam. Any work you submit that fails to meet this requirement will be penalized with a 10% deduction, provided we are able to identify the work as yours. If we are unable to identify the work as yours, a grade of zero will be awarded.

In-class Conduct

- Please turn **off** all cellphones, laptop computers, and tablets when you come into the class.
- Class starts at 3:10 pm, and ends at 4:00 pm on Tuesday and 5:00 pm on Thursday. Late arrival or early departure from class is inappropriate and will negatively affect your participation grade.
- Do not bring food into the classroom as this creates unwanted distractions that will affect the learning environment.
- Regarding anything that you might want to use in the classroom: if you are not using it to perform a task specifically related to what we are doing in class at that very moment, please put it away.

e-mail

If you want to ask a question via e-mail, please first check the electronic forums in the **Discussion Board** of the course website. Quite likely, you are not the only person with that same question, and if that question has already been asked, you will find the answer there. If the question has not been asked, go ahead and post it yourself instead of sending it by e-mail. This way you will also help other students facing the same issue. The forums in the discussion board are monitored regularly by the course instructor and your peers, making it the best way of communicating for various queries of diverse nature.

However, if the electronic forums are not the best place for your query, make sure you send your e-mail from an official **utoronto.ca** address (e.g., your UTmail+ account), as all other addresses will be filtered out automatically. Furthermore, include the code **PHYA10** somewhere in the subject line of your message, to ensure a quicker response time. I reply to e-mails within a period of 24 hours and I rarely reply to e-mails during weekends..

Absences

There will be no makeup options for practical activities, formal reports, or the tests. In the case of a **valid** and **documented** problem that supports an absence to a practical session, the grade will be calculated on the basis of all other submitted work. In the case of a **valid** and **documented** problem that supports an absence to the first test, the second test will have its weight increased accordingly. In the case of a **valid** and **documented** problem that supports an absence to the second test, the final examination will have its weight increased accordingly.

Academic Integrity and Respect for the Academic Endeavor

Academic integrity is essential to the pursuit of learning and scholarship in a university, and to ensuring that a degree from the University of Toronto is a strong signal of each student's individual academic achievement. As a result, the University treats cases of cheating and plagiarism very seriously. The University of Toronto's *Code of Behaviour on Academic Matters*:

<http://www.governingcouncil.utoronto.ca/policies/behaveac.htm>

outlines the behaviours that constitute academic dishonesty and the processes for addressing academic offences. Potential offences include, but are not limited to:

- In papers and assignments: Using someone else's ideas or words without appropriate acknowledgment; submitting your own work in more than one course without the permission of the instructor; making up sources or facts; obtaining or providing unauthorized assistance on any assignment; using someone else's clicker or multiple clickers for participation grades.
- On tests and exams: Using or possessing unauthorized aids; looking at someone else's answers during an exam or test; misrepresenting your identity.
- In academic work: Falsifying institutional documents or grades; falsifying or altering any documentation required by the University, including (but not limited to) doctor's notes.

All suspected cases of academic dishonesty will be investigated following procedures outlined in the *Code of Behaviour on Academic Matters*. If you have questions or concerns about what constitutes appropriate academic behaviour or appropriate research and citation methods, you are expected to seek out additional information on academic integrity from your instructor or from other institutional resources (see <http://www.utoronto.ca/academicintegrity/resourcesforstudents.html>).

Course Support

AccessAbility

Students with diverse learning styles and needs are welcome in this course. In particular, if you have a disability/health consideration that may require accommodations, please feel free to approach me and/or the AccessAbility Services Office as soon as possible. I will work with you and AccessAbility Services to ensure you can achieve your learning goals in this course. Enquiries are confidential. The UTSC AccessAbility Services staff (located in SW302) are available by appointment to assess specific needs, provide referrals and arrange appropriate accommodations (416) 287-7560 or ability@utsc.utoronto.ca

Discussion Board

The course website supports electronic forums useful for questions and discussions on course content, conceptual and detailed problems, textbook readings, as well as any issues relating to administrative details of the course such as deadlines, future topics, and scheduling. It is recommended that you check the forums on a regular basis to keep on top of current issues. You can subscribe to the various forums in order to receive email notifications when new posts are available, and there are also options for posting anonymously.

Physics Aid Centre

Located in SW503, this centre is managed and run by the Environmental and Physical Sciences students' Association (EPSA) and the Department of Physical and Environmental Sciences (DPES). Selected outstanding students will be available to offer help with questions and problems in Physics. The schedule will be posted on their website at <http://www.myepsa.ca/resources/physic-aid-centre/>

Lecturecasts and Lecture Notes

Videos of the lectures will be available after each session and will remain accessible for a period of two weeks. The slides from the lectures will be made available on the course website after each lecture. To prepare for a lecture you should read the assigned textbook materials.

Facilitated Study Groups (FSG)

Facilitated Study Groups are structured, weekly study groups for this class and other selected UTSC classes. Students share study strategies, compare notes and strategize for exams in a low-key, comfortable environment. FSG days and times will be announced in the course website. Everyone is welcome!

Class Schedule

This schedule is *tentative* and might change during the term in order to accommodate for variations in the lectures in response to student performance and understanding of the various topics.

Please note that it is your responsibility to read the assigned sections and chapters **before** each lecture.

The lecture discussions will **not** be a direct repetition of the basic material found in the textbook.

During the lectures we will concentrate on important and difficult aspects of the theories and concepts from your textbook readings. Therefore, failing to do the textbook readings before each lecture will significantly affect your ability to understand the class discussions.

Dates	Tuesday Lecture 3pm - 4pm	Thursday Lectures 3pm - 4pm / 4pm - 5pm
Sep. 11 Sep. 13	Introduction	Position and Velocity Ch.1: 1 - 4 Acceleration Ch.1: 5 - 8
Sep. 18 Sep. 20	1D-Kinematics Ch.2: 1 - 3	1D-Kinematics Ch.2: 7 1D-Kinematics Ch.2: 4 - 6
Sep. 25 Sep. 27	Vectors and Coordinates Ch.3: 1 - 4	2D-Kinematics Ch.4: 1 - 3 2D-Kinematics Ch.4: 4
Oct. 02 Oct. 04	2D-Kinematics Ch.4: 5 - 6	2D-Kinematics Ch.4: 7 Newton and Forces Ch.5: 1, 4 - 6
Oct. 09 Oct. 11	Newton and Forces Ch.5: 2 - 3, 7	1D-Dynamics Ch.6: 1 - 6 Newton's 3rd Law Ch.7: 1 - 3
Oct. 16 Oct. 18	Newton's 3rd Law Ch.7: 4 - 5	2D-Dynamics Ch.8: 1 - 4 2D-Dynamics Ch.8: 6 - 7
Oct. 23 Oct. 25	Impulse and Momentum Ch.9: 1 - 3	Momentum Conservation Ch.9: 4 - 6 Energy Ch.10: 1 - 5
Oct. 30 Nov. 01	Elastic Collisions Ch.10: 6 - 7	Work and Energy Ch.11: 1 - 5 Energy Conservation Ch.11: 6 - 9
Nov. 06 Nov. 08	Rotation and Torque Ch.12: 1 - 2, 5	Rotational Dynamics Ch.12: 10, 6, 4 Energy and Momentum Ch.12: 3, 7 - 11
Nov. 13 Nov. 15	Simple Harmonic Motion Ch.14: 1 - 2	Energy and Dynamics Ch.14: 3 - 5 The Pendulum Ch.14: 6
Nov. 20 Nov. 22	1D-Waves Ch.20: 1 - 3	Sound and Light Ch.20: 4 - 5 Intensity and Doppler Effect Ch.20: 6 - 7
Nov. 27 Nov. 29	Standing Waves Ch.21: 1 - 4	Wave Interference Ch.21: 5 - 7 Beats Ch.21: 8
