SYLLABUS

Introduction to Inorganic Chemistry
CHMB31H3, Fall 2018

Instructor Information

Instructor    Email    Office
Alen Hadzovic ahadzovic@utsc.utoronto.ca EV568

Office hours will be announced on Quercus before semester starts.

General Information and Course Content

Welcome to the amazing, complex and colorful world of inorganic chemistry, a chemistry discipline that deals with all chemical elements (natural and artificial), their properties, reactivities and compounds. Of currently known 118 elements, 92 occur in nature, while the rest were made in the laboratories. These 118 elements, these 118 LEGO blocks, are what all the stuff is made of: from the most distant stars and galaxies to the tiniest grain of dust in my office. This means that inorganic chemistry is everywhere.

Inorganic chemistry has a lot to cover, and material can be rather overwhelming. Essential for successful mastering of the inorganic chemistry material is solid understanding and knowledge of material from introductory chemistry courses (CHMA10H3 and CHMA11H3). Using this knowledge as a basis, inorganic chemistry can be turned into a piece of cake (a somewhat big piece, but still a piece...).

To make our introductory journey easier, our course is divided in two parts. The first part will cover introductory topics. You have already encountered most of this material in CHMA10H3 and CHMA11H3 courses and it would be a good idea to refresh your memory (the detailed topic list is given below). In part, we shall not only review these basic concepts but also further expand and apply them to the problems more related to the inorganic chemistry material. The second part of the course will cover the descriptive chemistry—the chemistry of the elements—for hydrogen and elements of Groups 1, 2 and 13-18 (or the main group chemistry).
Here is a detailed list of our topics (the chapter numbers are from our textbook Atkins’ Inorganic Chemistry 7th edition):

**Part I: Fundamental concepts**

1. Inorganic chemistry – a general introduction to the discipline and our course
2. The Elements – what are they? (Chapter 1 and on-line materials)
   a. Atoms and their structure
   b. Electronic structure
   c. Structure of nucleus, radioactivity, fission and fusion
   d. Nucleosynthesis: the birth of elements in stars and laboratory (basics of stellar and interstellar inorganic chemistry and artificial nuclear reactions)
   e. The periodic table of the elements: Overview

**NOTE:** Topics 2a, 2b, and 2e are related to the first year chemistry material and it would be a good idea to refresh your old knowledge early!

3. Molecules, compounds and bonding (Chapter 2 and on-line materials)
   a. Lewis bonding model and VSEPR theory
   b. Valence bond (VB) theory
   c. Basics of molecular orbital (MO) theory

**NOTE:** Topics 3a, and 3b have been covered in detail in the first year. In this case, solid prior knowledge is expected!

We shall devote significant portion of our time to MO theory (3c.)

4. Structure of simple solids (Chapter 4 and on-line materials)
   a. Describing the structure of solids
   b. Metals and alloys; metallic bonding
   c. Ionic solids; ionic bonding
   d. Thermochemistry and energetics of solid formation

5. Review of Important concepts:
   a. Chemical equilibrium
   b. Thermodynamics
   c. Types of inorganic reactions
   d. Redox reactions and electrochemistry (Chapter 6)
e. Acids, bases and their reactions (Chapter 7)

NOTE: Topics 5a, 5b, and 5c are not covered in the textbook but we really need them. You can use your CHMA10H3 and CHMA11H3 textbook and/or notes as sources (that should be adequate) to review this important material; solid prior knowledge is expected! Topics 4d and 4e are covered in the textbook but as you’ll see most of it is again an important revision of CHMA10H3/CHM11H3 material with some new concepts added.

Part II: Main group chemistry

6. Periodic table revisited (Chapter 9)
   a. Periodic trends
   b. Basic classes of inorganic compounds and their periodic characteristics

7. Hydrogen (Chapter 10)

8. The Group 1 elements (Chapter 11)

9. The Group 2 elements (Chapter 12)

10. The Group 13 elements (Chapter 13)

11. The Group 14 elements (Chapter 14)

12. The Group 15 elements (Chapter 15)

13. The Group 16 elements (Chapter 16)

14. The Group 17 elements (Chapter 17)

15. The Group 18 elements (Chapter 18)

Some special topics that will be covered only if the time permits:

1. Special topic I - Inorganic chemistry in nature I: Introduction to inorganic chemistry in living systems and medicinal inorganic chemistry

2. Special topic II - Inorganic chemistry in nature II: Introduction to mineralogy: silicate and carbonate minerals (we shall cover silicates and carbonates within Group 14; this ‘Special topic’ is intended as an extension.)

I am deliberately avoiding assigning topics to calendar (weeks or dates) because this gives us flexibility to slow down for topics that are more complex and repeat if needed what needs to be repeated as well as insert tutorial and practice as time allows.

The readings and problems from your textbook will be given to you at the end of each lecture in your lecture notes. The lecture notes will be posted on Quercus regularly in *pdf* format within course modules. The modules will contain other useful materials to help you expand your knowledge, test it and challenge it. The lecture notes provide you with the overview of important concepts, ideas etc. and are *the basis* for class discussions and lectures. They will be your primary source - master them first and after move to the textbook to expand your knowledge and then (only if you want to) check other sources.

**Knowledge of material from both lecture notes and relevant textbook readings is expected.**

You might know by now that there is WebOption for this course as well. Regardless of this fact, **I strongly encourage you to attend the lectures regularly.** There is a lot of material to be covered. If you do not attend the lectures and wait for the Web cast, you will easily end up having to watch hours and hours of material – *really not a good idea to master this subject*. If you come to the lectures and use WebOption only in a case of sickness or class conflicts, or to fill in your notes, you’ll remain on the top of the material covered and be more successful in the course (in comparison to only relying on WebOption).

This course (unfortunately) does not have tutorials in the program. However, just like during previous years, we shall have some practice time during the class.

**Laboratory Component of CHMB31H3**

The laboratory component starts during the week of September 10th and runs every other week. There are five experiments to be performed; each designed to demonstrate basic points from the lectures:
- Experiment 1: Acid-base and redox chemistry
- Experiment 2: The chemistry of groups 1 and 2
- Experiment 3: The chemistry of groups 13 and 14
- Experiment 4: The chemistry of groups 15 and 16
- Experiment 5: The chemistry of group 17 and inorganic analysis

Although every effort has been made to ensure that the experiments closely follow the lecture content, due to scheduling and other issues related to the organization of this course and classes in general, this is not always the case.

**Keep in mind that the laboratory component is mandatory.** You will find other details regarding the practical (i.e. requirements, best practices etc.) in the introduction part of the lab manual. The complete lab manual will be posted on Quercus portal as a .pdf file and is free of charge.

**Experiment/lab schedule**

Marking Scheme

<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Laboratory component</td>
<td>25%</td>
</tr>
<tr>
<td>2 term tests, 20% each</td>
<td>40%</td>
</tr>
<tr>
<td>Final exam</td>
<td>35%</td>
</tr>
</tbody>
</table>

Both term tests will be composed of short answer questions and for each you'll have 90 min to write. Details will be communicated through Quercus and/or in class prior to each exam. The time/date for both term tests will be announced but the first term test is generally around the reading week while the second one is in late November. The first term test will cover all material from the lecture 1 up to the week of the test or reading week (depends which one is first). The second term test covers the material between first term test and second term test.

The final exam is cumulative with about 1/3 of questions covering material from the first half of the course (material from the first term test) and 2/3 of questions covering the second part of the course (material covered after the first term test). The final will have both multiple choice and short answer questions and will take 3 hours.

You have examples of old term tests and final exams posted on Quercus. The format of your exams will be the same. Use these as extra practice problems. Please note that you will find old homework assignments (problem sets) among these old tests/exams. These are provided to you as a source of extra practice problems – you will not have homework assignments in this course, besides the lab datasheets.

Missed term test policies

If you miss a term test, you must provide the appropriate documentation within one week of the term test. If the reason is medical, you should download the official UTSC medical form available at http://www.utsc.utoronto.ca/~registrar/resources/pdf_general/UTSCmedicalcertificate.pdf and have your doctor complete the form. If no acceptable documentation for your absence is
provided (again: within one week of the test) you will be assigned zero grade for that test. With the documentation you have two choices for make-up:

a) add the value of the missed test to your final exam (for example, if you miss a term test for a valid reason and chose this option, your final exam will be worth 35% + 20% = 55% of your final mark), or b) write a make-up test (the time/place would be determined in advance).

**Facilitated study groups (FSG) for CHMB31H3**

Following up the suggestion from previous year, we are establishing the Facilitated Study Groups for CHMB31H3. These weekly study sessions are open to everyone in the class. Attendance is voluntary, but students who attend regularly often earn higher grades. Please be sure to fill out the survey in the first week of class to help ensure the study groups are scheduled at optimal times. If you have any questions, please ask your facilitator, or visit the FSG website at http://ctl.utsc.utoronto.ca/home/fsg.

**Office hours and contact info**

My office is located in the Environmental Sciences and Chemistry Building (behind the Instructional Center), 5th floor, room EV568. The office hours’ schedule will be posted on Quercus as soon as my schedule is finalized but prior to the start of the semester. If you would like to see me outside the office hours (for any reason), please e-mail me and we’ll schedule the time. You can pay me a visit before the semester starts and before announcement of the regular office hours.

I can also be reached via e-mail: ahadzovic@utsc.utoronto.ca.

**Achieving Success in Inorganic Chemistry**

As mentioned previously, **stay on the top of your material**: read, practice and take notes on regular basis. Much of the material requires knowledge from CHMA10 and CHMA11—**do not be shy** to go back and refresh your memory. **Take advantage of office hours**—note the questions that come up as you study, come to the office hours and discuss them. **Ask questions during the**
lectures– while the question is fresh in your mind and the material is still new. Attend Facilitated Study Groups–they help a lot!

**Academic Integrity**

Academic integrity is one of the cornerstones of the University of Toronto. It is critically important both to maintain our community which honors the values of honesty, trust, respect, fairness and responsibility. It also protects you, the student within our community as well as the value of the degree towards which you are all working so diligently. Detailed information about how to act with academic integrity, the Code of Behavior on Academic Matters, and the processes by which allegations of academic misconduct are resolved can be found online: [http://www.artsci.utoronto.ca/osai/students](http://www.artsci.utoronto.ca/osai/students) and [http://www.utsc.utoronto.ca/~vpdean/academic_integrity.html](http://www.utsc.utoronto.ca/~vpdean/academic_integrity.html)

Section B of the University of Toronto's Code of Behaviour on Academic Matters ([http://www.governingcouncil.utoronto.ca/policies/behaveac.htm](http://www.governingcouncil.utoronto.ca/policies/behaveac.htm)) lists actions that are considered academic offences. Some of the most common offences are:

- To use someone else's ideas or words in their own work without acknowledging that those ideas/words are not their own with a citation and quotation marks, i.e. to commit plagiarism.
- To include false, misleading or concocted citations in their work.
- To obtain unauthorized assistance on any assignment.
- To provide unauthorized assistance to another student. This includes showing another student completed work.
- To submit their own work for credit in more than one course without the permission of the instructor.
- To falsify or alter any documentation required by the University. This includes, but is not limited to, doctor's notes.
- To use or possess an unauthorized aid in any test or exam.
There are other offences covered under the Code, but these are by far the most common. Please respect these rules and the values which they protect. Offences against academic integrity will be dealt with according to the procedures outlined in the Code of Behavior on Academic Matters.

**Accessibility**

Students with diverse learning styles and needs are welcome in this course. In particular, if you have a disability/health consideration that may require accommodations, please feel free to approach me and/or the AccessAbility Services Office (ability@utsc.utoronto.ca) as soon as possible. I will work with you and AccessAbility Services to ensure you can achieve your learning goals in this course. Enquiries are confidential. The UTSC AccessAbility Services staff are available by appointment to assess specific needs, provide referrals and arrange appropriate accommodations. More details are available at: http://www.utsc.utoronto.ca/~ability/.

**CHMB31H3 Resources**

Your required textbook:

*Also recommended:*

*Other suggested books*

This is an excellent inorganic chemistry textbook. Importantly for us, it has a very good coverage of nucleosynthesis and formation of elements in the stars. The rest of it is an advanced reading. If you would like to explore and learn more about the elements, their properties and compounds, this
book is a great starting point. It covers in particular detail the elements, their properties and compounds.

**Some popular books (non-textbooks) on chemical elements:**

There are many other popular science books dealing with the elements, their birth and occurrence, their compounds and history. Some of them can be found in UTSC library!

**On the web**

**VISUAL ELEMENTS PERIODIC TABLE:**

[http://www.rsc.org/chemsoc/visualelements/pages/periodic_table.html](http://www.rsc.org/chemsoc/visualelements/pages/periodic_table.html)

A beautiful and artistic representation of periodic table and the elements

**WEBELEMENTS** [www.webelements.com](http://www.webelements.com)

Provides a lot of data for each element (but I find it a bit messy)

**WEBMINERAL** [www.webminer.com](http://www.webminer.com)

Minerals are only one place where we can find inorganic chemistry in nature.
THE Guided Tours of Metalloproteins http://www.chem.utoronto.ca/coursenotes/GTM/main.htm

The other place where we find inorganic chemistry is in us and all other living creatures!

GOOD LUCK AND SEE YOU SOON!!

AH
